DIGITAL LITERACY PROJECT REPORT

Project Title	DIGITAL LITERACY PORTFOLIO PROJECT
Course Code	CSE0001
Course Title	Digital Literacy
Domain	Digital Literacy and Technology
Submitted By	Natansh Patel
Register Number	25BAI11174
Date	31 March 2026

Introduction

This project was undertaken as part of the Digital Literacy course to develop essential digital skills required in today's world. In the modern era, students are expected to use digital tools not only for learning but also for communication, collaboration, and building a professional identity.

The objective of this project is to understand how various digital platforms and tools can be used effectively and responsibly. Throughout the project, I worked on different tasks such as creating an infographic, building a digital portfolio, using online collaboration tools, writing professional emails, and learning about cybercrime awareness.

Each task provided practical exposure and helped me improve my confidence in using technology. This project also made me more aware of the importance of safe internet practices and responsible digital behavior. Overall, it has been a valuable learning experience that will support both my academic journey and future career.

TASK 1: DIGITAL LITERACY INFOGRAPHIC

In Task 1, I created a digital literacy infographic using Canva. Canva is an easy-to-use design tool that allows users to create visually appealing content with templates, icons, and graphics. I

selected a suitable template and customized it according to the topic.

My infographic explains the concept of digital literacy and highlights important areas such as useful digital tools, safe internet practices, professional online presence, and email etiquette. I included examples of tools like Google Docs, Canva, GitHub, and LinkedIn to make the content more relatable for students. The goal was to present information in a simple and visually organized way so that it is easy to understand.

One challenge I faced was maintaining a balance between design and content. I had to ensure that the infographic was not overcrowded while still including all important points. This task was interesting because it improved my creativity and helped me understand how visual presentation plays an important role in communication.

TASK 2: DIGITAL PORTFOLIO

In Task 2, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. These platforms are widely used for building a professional digital presence and developing technical skills. GitHub is mainly used for managing and showcasing projects, which allows me to store my work and share it with others. LinkedIn is a professional networking platform where students can connect with peers, faculty, and industry professionals. It also helps in exploring internships and career opportunities.

Kaggle is a platform focused on data science and problem-solving, where users can learn, practice, and participate in challenges.

Setting up these profiles helped me understand how important it is to maintain a professional identity online. Over the next four years, I plan to regularly update these platforms by adding my projects, skills, and achievements. I also aim to actively use these platforms to learn new technologies, connect with professionals, and prepare myself for future career opportunities.

TASK 3: PLATFORMS AND COLLABORATION

In Task 3, I explored both coding and collaboration platforms. I used HackerRank as the coding platform, where I solved a beginner-level problem called “Solve Me First.” This helped me understand basic problem-solving and how to write and execute code in a structured environment. It also improved my confidence in coding using Python.

For collaboration tools, I used Google Forms and Google Sheets. I created a form titled “Digital Literacy Awareness Quiz,” which included multiple-choice and short-answer questions. I also linked the form to Google Sheets to automatically collect and

organize responses. This helped me understand how data can be gathered and managed efficiently.

These tools will be very helpful in my academic journey. Coding platforms like HackerRank will improve my programming skills, while tools like Google Forms and Sheets will help in conducting surveys, managing data, and working on group projects effectively.

TASK 4: EMAIL ETIQUETTE

In Task 4, I learned about the importance of proper digital communication through email etiquette. A common situation where poor communication causes problems is when a student sends an email to a professor without a clear subject line or proper greeting. For example, writing a message like “Send assignment” without context or politeness can come across as rude and unclear. This can lead to misunderstandings or even the email being ignored.

Such situations can be avoided by following basic email etiquette. The student should include a clear subject line, use a respectful greeting, explain the purpose of the email properly, and end with a polite closing. Maintaining a professional tone helps in effective communication and creates a positive impression. This task made me realize how small details in communication can have a significant impact.

TASK 5: CYBERCRIME AWARENESS

While working on this task, I was surprised to learn how easily people can become victims of cybercrime, especially in cases like UPI payment fraud. I realized that many scams do not require advanced technical knowledge but instead take advantage of a person's lack of awareness or trust. Even a small mistake, such as approving an unknown payment request or sharing an OTP, can lead to financial loss.

This made me more aware of the importance of being careful while using digital platforms. One habit I will change is that I will always verify any suspicious message, call, or payment request before taking action. I will also make sure never to share sensitive information like OTP, passwords, or UPI PIN with anyone.

CONCLUSION

Overall, this project helped me develop a better understanding of digital literacy and its importance in today's world. Through different tasks, I learned how to use digital tools effectively, build a professional online presence, and communicate properly in a formal manner. I also became more aware of cyber safety and the risks associated with online activities. This project improved my practical skills and confidence in using technology for academic purposes. It also encouraged me to be more responsible and cautious while interacting in the digital environment. These learnings will be useful for my future studies and career development.
